Appendix: Community Cohesion Statistics by ward	30

1. Introduction

This report presents community cohesion statistics from the 2011 Census and Quality of Life survey 2007–2012 for the Bristol Local Authority area.

2. Community change since 2001

Figure 1: Community change 2001-11

Source: Office for National Statistics © Crown Copyright 2013.

Since 2001 there has been a large increase in the total number of people living in Bristol which has resulted in a changing population profile. In Bristol, there are now at least 45 religions and at least 50 countries of birth represented and at least 91 main languages spoken by people living in Bristol.

Bristol has experienced similar trends to England and Wales as whole in terms of changes to the population. The total population is estimated to have grown by 38,100 (9.7%) between 2001 and 2011, from 390,000 in 2001 to 428,100 in 2011.

The proportion of the population who are not 'White British' has increased from 12% to 22% of the total population. The largest growth has been in the White Other, Black African and Black Other groups – this includes growth particularly in the Polish and Somali populations. Overall the Black and Minority Ethnic group (BME¹) population has increased from 8.2% in 2001 to 16% in 2011.

The proportion of people living in Bristol who were not born in the UK has increased from 8% of all people in 2001 to 15% of all people in 2011. Of all the people not born

¹ The BME population includes people of all ethnic groups other than White British, White Irish, White Other and White Gypsy or Irish Traveller

in the UK, 61% of them have arrived in the UK in the last decade (ie between 2001 and 2011).

The proportion of people who are Christian has decreased from 62% to 47%, whilst the proportion of people stating that they have no religion has increased from 25% to 37%. The Muslim population living in Bristol has increased from 2% of all people to 5% of all people.

Although all parts of the city have experienced changes in the people living in their area since 2001, in terms of changes which may have the greatest effect on community cohesion, changes have been concentrated in the inner city and inner east areas of the city, in particular in the wards of Lawrence Hill, Ashley, Easton and Eastville. Cabot has also experienced a large growth in population but this is mainly attributable to a large increase in the number of students since 2001, in particular international students. Statistics summarising change by ward between 2001 and 2011 can be found in the appendix.

3. Population

As outlined above, there has been a substantial increase in the number of people usually resident in Bristol over the past decade (2001 to 2011). The total population is estimated to have grown by 9.7%, from 390,000 in 2001 to 428,100 in 2011, a higher rate of growth than the England and Wales average of 7.3%. The growth includes an additional 10,100 students living in Bristol during term time.

The estimated components of population change in Bristol are shown in Figure 2. This shows that population growth in Bristol has been generated by international in-migration, increasing numbers of births and decreasing numbers of deaths. There has been a notable spike in international in-migration between 2004 and 2005, thought to result from the accession countries joining the European Union in 2004.

Whilst there have been significant estimated increases in population across many wards in Bristol between 2001 and 2011, there has been exceptional increases in Cabot of 6,100 (62.2%) people and Lawrence Hill of 5,700 (43.2%) people. Other wards which have experienced large increases in the population since 2001 are Ashley 2,800 (20.9%), Southville 2,200 (21.5%), Bedminster 1,700 (15.7%), Bishopston 1,700 (13.8%) and Cotham 1,600 (15.1%). At the same time there has also been decreasing populations in Henleaze, Stockwood, Whitchurch Park, Stoke Bishop and Kingsweston wards. Figure 3 illustrates the distribution of population change across Bristol between 2001 and 2011.

4. Ethnic group

The Black or Minority Ethnic group (BME) population (all groups with the exception of all the White groups) make up 16% of the total population in Bristol. This is an increase from 8.2% of all people in 2001.

The non-'White British' population (all groups with the exception of White British) make up 22% of the total population in Bristol. This is an increase from 12% of all people in 2001.

The largest increases since 2001 have been in Other White, Black African, Black Other and Multiple/mixed ethnic groups. These changes reflect the large growth in the Somali and the Polish populations in Bristol.

The BME population varies significantly across the city (see Figure 6) - in Lawrence Hill ward 55% of all people belong to a BME group compared to 4% in Whitchurch Park. This difference is emphasised even more when looking at areas smaller than wards – in 'St Pauls Grosvenor Road' 80% of all people belong to a BME group whilst just 1.4% are BME in 'The Coots' in Stockwood.

Figure 4: Population by ethnic group

Source: ONS © Crown Copyright 2013. ONS Crown Copyright Reserved [from Nomis]

Since 2001, the distribution of the BME population of Bristol has changed considerably - figure 6 maps the percentage of people who belong to a BME group by ward both in 2001 and in 2011. Whilst in 2001 the BME population largely lived in the inner city wards of Ashley, Easton, Lawrence Hill and Eastville, with all other wards having a BME population of below 14%, in 2011 the distribution of the BME

population had extended out to the north east of the city. Now wards with a BME population of above 14% include Lawrence Hill, Easton, Ashley, Eastville, Lockleaze, Cabot, Hillfields, St George West, Frome Vale, Horfield and Southmead.

Any other ethnic group	2,543	0.6	0.6
Bangladeshi	2,104	0.5	0.8
Arab	1,272	0.3	0.4
White Gypsy or Irish Traveller	359	0.1	0.1
Total White	359,592	84.0	86.0
Total Black and minority ethnic groups	68,642	16.0	14.0
All people	428,234	100.0	100.0

Somali population estimate

The Somali population are not identified as a separate ethnic group in the 2011 Census but are included in both the Black African and Black Other groups, depending on which tick box people chose on the Census questionnaire.

The best estimate we can make of the number of Somalis living in Bristol is to take the number of Black Africans and Black Others who identified themselves as Muslims and to then subtract those Muslims born in parts of Africa outside Eastern Africa. This gives us a Somali population estimate of 8,100.

Local knowledge suggests that it is likely that some Somalis, in particular men living in informal accommodation, may have been under estimated by the 2011 Census. Taking this into consideration, the likely number of Somalis living in Bristol in 2011 could be around 10,000.

5. Religion

There are at least 45 religions represented in Bristol (see Figure 8). The largest religion is Christian (47%), although following national trends the proportion of people stating that they are Christian has fallen from 62% of all people living in Bristol in 2001.

Bristol is ranked 7th in England and Wales for the proportion of people stating that they have no religion - 37% of the population state they have no religion, up from 25% in 2001.

Since 2001 the religion to increase the most in Bristol has been the Muslim religion which increased from 2% of all people in Bristol in 2001 to 5% of all people in 2011 (see Figure 9).

6. Country of Birth

There are at least 50 countries represented in Bristol (see Figure 12). 15% of the people living in Bristol were born outside the UK, this is an increase since 2001 when the proportion of people born outside the UK was 8%.

Lawrence Hill ward has the highest proportion of people not born in the UK at 37% of the total population.

Figure 11 lists the most popular countries of birth (not including the UK). Poland is the most popular country of birth in Bristol followed by Somalia, India and Jamaica

7. Migrants

For the first time in 2011, the census asked a series of questions about migration, including a question about when people migrated to the UK. Of the people living in Bristol not born in the UK, the majority (60%) have been resident in the UK for less than 10 years. Of the people not born in the UK, 69% arrived in the UK when they were of working age and 30% arrived as children.

8. Language

For the first time in 2011, the census asked a question about main language spoken and proficiency in English. This found that there are at least 91 main languages spoken in Bristol (see Figure 19).

English is the main language spoken followed by Polish and then Somali – this is illustrated by Figures 17 and 18 whereby the size of the text represents the number of people who speak that language as their main language. Overall 9% of people do not speak English as their main language.

Proficiency in English is categorised into people who can speak English very well, those who can speak English well, those who cannot speak English well and those who cannot speak English. Overall in Bristol 1.5% of people cannot speak English or cannot speak English very well. Figure 20 shows the distribution across Bristol.

Interestingly, although there is a high proportion of people whose main language is not English living in Cabot ward (19.3%), there is a very low proportion of those who do not speak English or do not speak it well (1.5%). This reflects the high proportion of foreign students living in the ward.

9. Quality of Life – community cohesion indicators

The following five indicators have been measured in the Quality of Life annual residents' satisfaction survey for the past eight years. Each indicator also includes a graphical interpretation with a map, graphs and figures for wards and equalities groups.

% respondents who feel they belong to their neighbourhood 😞

This indicator fell for the first time in seven years from 64% in 2011 to 60% in 2012, but is still a significant improvement from the figure in 2006 when it measured 57%. The ward pattern across the city has been similar each year, with the highest sense of belonging in the west/northwest (particularly Stoke Bishop, Westbury-on-Trym, Henleaze, Bishopston, Redland, Clifton and Southville) plus Ashley in the Inner City (all 67% or above in 2012). Hillfields (43% in 2012), Lawrence Hill (49% in 2012) and Henbury (51% in 2012) have tended to be the wards with the lowest percentages of respondents 'who feel they belong to their neighbourhood'. The indicator was also significantly lower in deprived areas of the city (52%).

Equalities analysis indicated significantly more of the older people (67%) had a higher sense of belonging. Fewer people who said they had 'no faith' felt they belonged to their neighbourhood (56%). This pattern was the same as in 2011.

Further analysis (not shown) suggests that significant predictors for having a sense of belonging to the neighbourhood are age, having a Black or minority ethnicity, living in a deprived area and housing tenure. Attachment to the local area increases with age, from 43% of people in their twenties to 77% of those aged seventy or over. Black and minority ethnic groups are more likely to say they 'feel they belong to their neighbourhood' (66%). Living in a rented accommodation appears to lessen the feeling of investment in the neighbourhood (53% of people living in social housing; 48% of people privately renting). There is some weaker evidence that people with lower educational qualifications and men are less likely to feel that they belong to their local area.

% respondents who agree people from different backgrounds get on well together 😊

This indicator improved from 53% in 2005 to 59% in 2008 and remained at this level, measuring 60% in 2012.

The ward pattern has been similar in recent years. Ashley, Bishopston, Henleaze and Redland usually have some of the highest values of the indicator (at least 74% in 2012), and deprived areas record the lowest (52%). In Hillfields the proportion of residents who agree that 'people from different backgrounds get on well together' rose from 35% in 2011 to 55% in 2012.

Further analysis (not shown) suggests that more Black and minority ethnic residents (67%), people aged seventy and over (66%) and respondents with higher educational qualifications thought people in their neighbourhood got on well together.

% respondents who agree people treat other people with respect in their neighbourhood 😊

This indicator steadily increased from 57% in 2006 until 2010, when it measured 67%. This proportion remained unchanged in 2011 and 2012.

The indicator pattern is similar each year with a good deal of variation across the city, from 46% Filwood to 93% in Henleaze. Over the past seven years, the indicator has shown a significant improvement in Avonmouth, Brislington West, Lawrence Hill, Lockleaze and St George East. This improvement has narrowed the gap between deprived areas and the rest of the city. Still significantly fewer people (51%) in deprived areas agreed people treat each other with respect and consideration. Further analysis (not shown) suggests that people of Muslim faith (75%), people aged seventy and over (80%) and people with higher qualifications agreed people are treated with respect. People who live in social housing and carers (62%) are less likely to agree that people are treated with respect.

% respondents who feel they can influence decisions in their local neighbourhood 😐

Only one in four (24%) of residents feel influential, which is not significantly different from the situation in 2005, when 22% of respondents felt influential.

There is little variation across the city for this indicator. St George East and St George West neighbourhood partnership, at 15%, has the smallest proportion of residents feeling influential whilst Windmill Hill has the biggest, at 32%. The position has worsened in Ashley where the indicator has decreased from 35% in 2008 to 21% in 2012.

Further analysis (not shown) suggests predictors for feeling influential are having higher educational qualifications and being older. There is evidence for people of Muslim faith and people living in social housing feeling more influential.

% respondents satisfied with their local neighbourhood (or area) as a place to live 😊

Supplementary indicator: % respondents who feel their neighbourhood has got better/worse/not changed in the last 2 years 😊

In 2012, 83% of residents said they were satisfied with their neighbourhood, a steady and significant improvement since 2005, when 77% of residents said the same. Bristol also compares well with similar cities: Manchester 77%, Newcastle 77%, Nottingham 84% and Sheffield 81%.

Satisfaction was significantly lower in deprived areas of the city (70%) but the gap between the deprived areas and the rest of the city has narrowed since 2005. Satisfaction was also lower for disabled people (78%), people in their twenties (78%) and carers (not shown), but was highest for people aged 70 years and over (88%) and people with higher qualifications (not shown). Most satisfied residents lived in Westbury-on-Trym, at 99% and the least in Lawrence Hill at 65%.

Questions were also asked about neighbourhood change in the last 2 years (graph below). The Greater Fishponds area (Hillfields, Eastville and Frome Vale) had a higher proportion of residents who said their neighbourhood had got worse (36%).
