

Ward Profile Report

(November 2023)

This dashboard compares the 34 Bristol City Council wards with the Bristol average, across a range of data subjects.

Update November 2023 (v3.5):

Data has been updated for the following topics:

- **Children with excess weight (under Healthy Lifestyles)**
- **Life Expectancy**
- **Premature Mortality**

Update October 2023 (v3.4):

Data has been updated for the following topics:

- **Adult Social Care**
- **Children Services**
- **Claimant Count**
- **Education**
- **House Prices**
- **Jobs**
- **Pension Credit**
- **Youth Offending**

A table of contents has also been added, displaying the range of topics covered within Ward Profiles. Clicking on any will take you direct to the page.

Please send any comments on this tool to: research@bristol.gov.uk. All datasets within the Ward Profile Tool can be downloaded from [Open Data Bristol](#).

Adult Social Care

Bristol City Council

September 2023

Lawrence Hill

Further Information

Data

Figures quoted are 'as at' the last day of that particular month.

Calculation

Data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. social care data). Latest population uses the Census 2021 data. Caution should be taken when viewing trend previous to this, which uses mid-year population estimates. Historic data may be changed once the Office for National Statistics revise previous mid-year estimates.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Social Care Data uses standard deviation to identify whether the gap is significant.

Significantly High

Clients receiving a community based service aged 65+

Bristol Average

Clients in Care Homes aged 65+

Bristol Average

Clients receiving a community based service aged 65+

Child Poverty

Children living in low income families

Lawrence Hill

Further Information

Data & Calculation

The percentage of children living in low income families by ward, by financial year ending (FYE). Low income is a gross income measure Before Housing Costs and includes contributions from earning, state support and pensions. Percentages are rounded to 1 decimal point. Relative low income measures families on low income within the referenced year. Absolute low income measures families in low income compared to FYE 2011. Caution, although population estimates are the latest available at the time, some ward populations may not reflect more recent changes in the local population. Therefore, some percentages should be viewed with care.

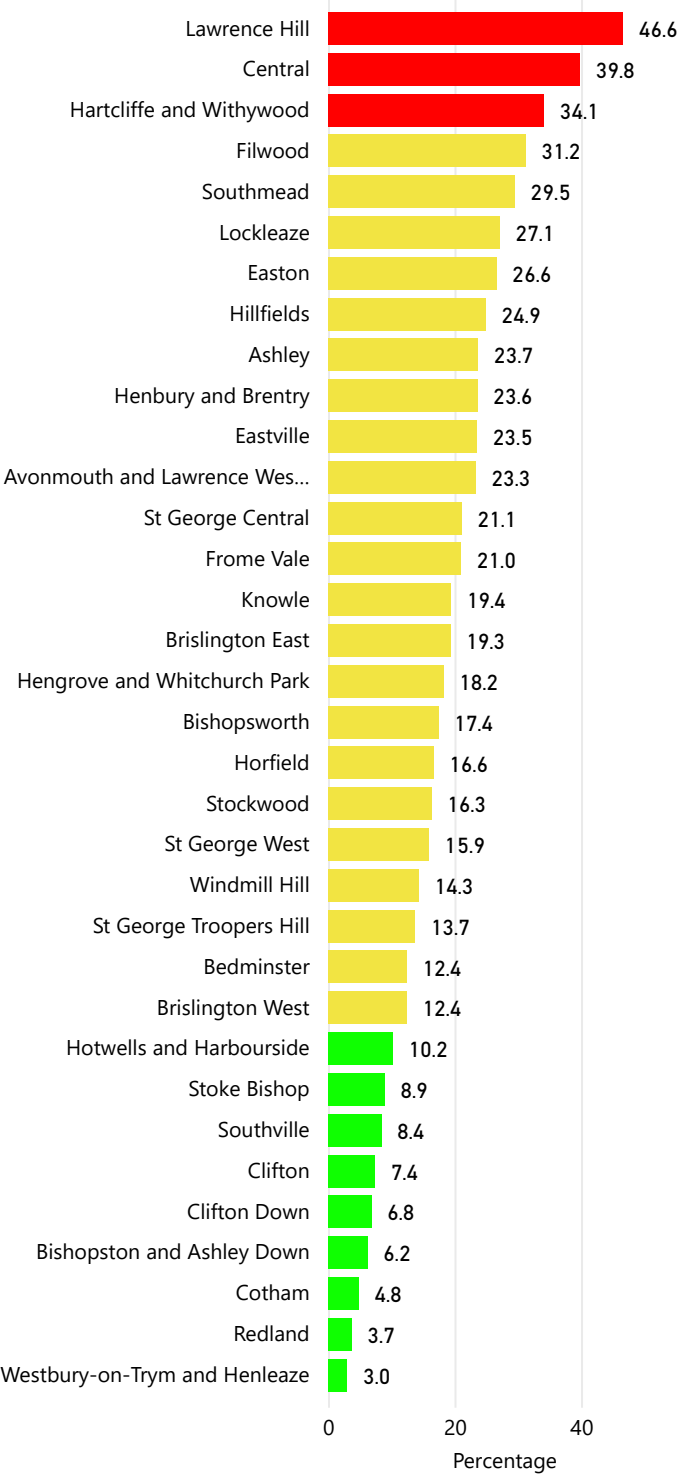

Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant, child poverty data uses standard deviation.

Significantly Better

Significantly Worse

Ward Comparison (relative low income) 2022

Lawrence Hill

Further Information

Data

Figures quoted are 'as at' the last day of the stated month. The exception of suspensions data which represents the year (January to December).

Some wards present as 'No Data Available'. This represents those with no cases and those with five or less cases, suppressed to protect identity.

Calculation

Data is expressed as a 'rate per 1,000' of the ward population within the cohort selected (i.e. social care data). Census 2021 population data has been used for data from the year 2023.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Social Care Data uses standard deviation to identify whether the gap is significant.

Number of individuals suspended	December 2022	60.3	36.8

Children known to Social Care (total)

September 2023

Lawrence Hill

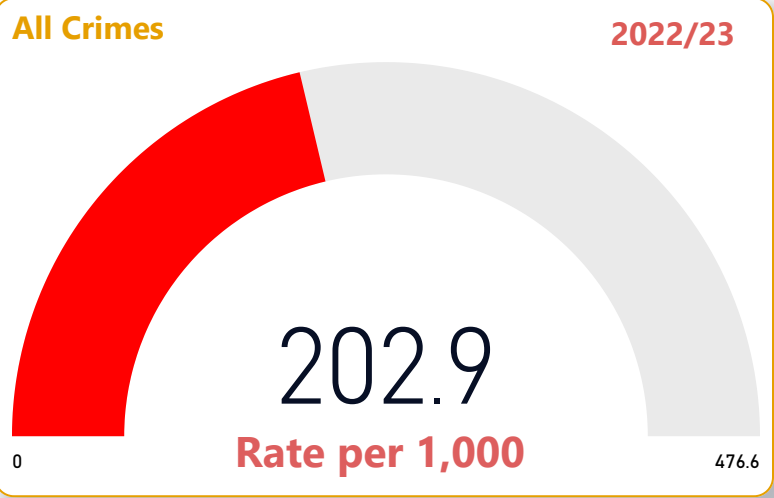

Further Information

Data
Figures for crime offences and youth offenders are a total for the respective year. The number of youth offenders are used as the indicator rather than the number of offences committed. Quality of Life data is from the 2022-23 survey.

Calculation
Crime offence and youth offender data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. crime data). Census 2021 population data has been used for data from the year 2023. Quality of Life data is weighted by age and sex. Percentages are rounded to 1 decimal point.

Comparing wards against the Bristol Average
Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant; crime offences and youth offenders data uses standard deviation whilst the quality of life data uses the statistical 't-test'.

Youth Offenders	2022/23	Rate per 1,000	3.3	4.5

Lawrence Hill

Further information

Data & Calculation

Based on all children in Bristol local authority maintained schools, academies and free schools (but not independent schools). The Bristol total will include pupils living outside the area but the ward figures will not. *Due to the Coronavirus (Covid-19) pandemic, attainment data is not available for the years 2020 and 2021.

Most figures are expressed as a percentage of pupils in a given cohort. Attainment 8 and Progress 8 scores are measures from Department for Education. Attainment 8 is an average across 8 subjects (extra weighting is given to English and Maths). Progress 8 compares how well a pupil has progressed across the same 8 subjects, compared nationally to other pupils with the same prior attainment at the end of Key Stage 2. Percentages are rounded to 1 decimal point.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Education data uses standard deviation to identify whether the gap is significant.

Further Information

Data

Census 2021 data produced by the Office for National Statistics. This pages combines data relating to health issues and disability, carers and general health.

Calculation

Ward data is expressed based on either the number of people or number of households. Percentages are based upon the total number of people or households within the ward. Bristol data uses the total across all wards.

Percentages are rounded to 1 decimal point.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Health data uses standard deviation to identify whether the gap is significant.

Lawrence Hill

Further Information

Data
Quality of Life data is from the 2022-23 survey. Public Health Child Measurement data 2021/22-2022/23 for children in reception year and year 6 represents the first data available post-Coronavirus (Covid-19) pandemic.

Calculation
Both Quality of Life and Public Health Child Measurement data is expressed as a percentage. Quality of Life data is weighted by age and percentage. Public Health Child Measurement data is an average of the 2 year period and excludes wards with less than 100 pupils measured over that period. Percentages are rounded to 1 decimal point.

Comparing wards against the Bristol average
Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant Public Health Child Measurement data uses statistical confidence intervals, whilst quality of life data uses the statistical 't-test'.

Significantly Better

Life Expectancy (female)

Public Health 2020-2022

Lawrence Hill

Further information

Data

Data expresses life expectancy in years, separately for males and females.

Calculation

Life expectancy is normally calculated by taking a three year average. However, the period 2020-2022 uses a two year average. Numbers for this period are also provisional and subject to change. A delay in ward population estimates from the Office for National Statistics means year 2020 population estimates have been used instead. Once new estimates are published life expectancy numbers will change.

Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. Life expectancy data uses statistical confidence intervals to identify whether the gap is significant.

House Prices

Median House Price Statistics, produced by Office for National Statistics.

Lawrence Hill

Further Information

Data

Data represents the price paid (£) for residential dwellings sold at market value, using open data from HM Land Registry.

Data is published quarterly and represents a 'rolling year'. This data starts with the year-ending March 2011.

Calculation

The data used takes the 'median' (middle value) price paid across each 'rolling year'. A minimum of five records are required to ensure a robust house price that is representative of prices paid in a particular area.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. House Price Data uses standard deviation to identify whether the gap is significant.

Ward Comparison (No religion)

Lawrence Hill

Futher Information

Data & Calculation

The data is from the Quality of Life Survey 2022-23. Results are expressed as a percentage of respondents, weighted by age and sex. Percentages are rounded to 1 decimal point.

Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Quality of Life data uses the statistical 't-test' to identify whether the gap is significant'

Background Information to Ward Profiles

The Ward Profiles show data for the 34 Bristol City Council wards. This update contains the latest data as of November 2023 and includes data updates for; children with excess weight, life expectancy and premature mortality. This follows the October 2023 update; adult social care, children services, claimant count, education, house prices, jobs, pension credit and youth offending. The interactive tools compare data for each of the wards against the Bristol (citywide) average and highlights any significant differences for that ward.

All datasets within the Ward Profiles tool can be downloaded from [Open Data Bristol](#). This is the Open Data platform for Bristol which includes datasets with the ability to build custom maps and charts within the platform or to export the datasets.

The Ward Profiles Tool is produced by the Insight, Performance & Intelligence Service of Bristol City Council. All data has been collated , analysed and produce by this service unless otherwise. Further products are available on our [Statistics and census information](#) web page or by email; research@bristol.gov.uk.

The Ward Profiles Tool is part of the overall Joint Strategic Needs Assessment (JSNA) process. They provide a local ward-based focus on the data produced for the JSNA Health and Wellbeing data profile, which is updated throughout the year. Further information, including the JSNA data profile and chapters, is available on our [Joint Strategic Needs \(JSNA\)](#) web page.

Data release period The Ward Profiles are updated regularly during the year with new data. As new data for each of the datasets is available (i.e. publication dates) at different times of the year, the data within the Ward Profiles Tool may not always align with that found in other reports. At the top of each topic page (i.e. beneath the page title) we confirm the time period that is relates.

Data sources for all topics covered by the Ward Profiles can be found on our Sources page.

Mapping Tools

Bristol City Council provides a number of web-based tools which are designed to provide users with access to maps and spatial information quickly and easily. **CLICK ON THE TITLE LINKS BELOW THE IMAGES** to follow the links.

PinPoint

Pinpoint is designed to help locate local information on the most convenient services from a specific location. This includes details such as opening times and contact numbers.

Local information is organised under themes (e.g. community and safety, education, housing and property). In addition, there is information on council assets and the historic environment.

My Neighbourhood

My Neighbourhood includes links to relevant statistical data and information such as planning applications, waste collections and political representation in your area. All of which is summarised in a single view.

You can also do a "find my nearest" search for a range of facilities to any given address.

Know Your Place

Know Your Place provides access to a variety of historic maps covering the City of Bristol. The majority of the maps are scanned from original archives held at the Bristol Record Office.

The scanned images have been overlain on Modern Ordnance Survey Mastermap digital mapping and contextual layers. Also included are historical environment records, pictures, postcards and photo collections.

Bristol ArcGIS Online Maps

Bristol ArcGIS is a collection of online maps, map apps and story maps.

Open Data Bristol

Open Data Bristol is a site for sharing data in Bristol. It also includes a number of dashboards such as; Quality of Life, Air Quality and Council Elections.

The data can be viewed, used and re-used subject to the licence terms. There is also the ability to build maps and charts (i.e. located under the 'Tools' tab) within the platform. You can also export the data should you wish to use your own analysis tools.

Significance Ratings

To compare any significant gap between a ward and the Bristol average we have used one of three methods;

Standard Deviation is a way of expressing how much each ward deviates from the mean value for all 34 wards in Bristol. This has been used as part of a calculation comparing each ward to the Bristol average. The difference is judged significant if it is greater/lower than the Bristol average +/- the standard deviation across all wards.

Confidence Intervals provide an upper (confidence interval) and lower (confidence interval) number that provides a range within which we can be confident a ward figure lies within. The level of confidence is based on a 95% certainty. The difference is judged significant if either the ward lower confidence interval is above the upper confidence interval of the Bristol average or the ward higher confidence interval is below the Bristol average lower confidence interval.

Statistical 't' test is a statistical test that measures the difference in group means divided by the pooled standard error of the two group means. This calculates a number (the t-value) illustrating the significance of the difference between the two group means being compared, and estimates the likelihood that this difference exists purely by chance (p-value).

Overlapping significance ratings within ward comparison charts

Overlapping significance ratings happen where either confidence intervals or the statistical 't'-test have been used to calculate significance. Ward comparison charts are ordered with the biggest number starting at the top. Sometimes the range of wards "not significantly different" from the average may overlap with the range of wards "significantly better" and/or "significantly worse" than the average. This may appear counterintuitive at first glance but can happen due to these calculation methods. The power of statistical 't'-test to detect a significant difference is greater in wards with larger numbers of respondents or smaller standard errors. The confidence interval has a +/- probability, defined by a lower limit and upper limit, based on a 95% confidence level which is a measure of the degree of uncertainty/certainty in a sampling method.
